Pollen information for Vienna

Released on 2nd of February 2012

Early start of the season

Extremely cold weather prevents alder and hazel from flowering. Nevertheless Hazel pollen season and alder pollen season are ready to commence. Hazel needs over 5°C and alder over 8°C for pollen release, at 12 or more °C, this year the hell may break out as we expect high loads of both of them.

Patient's hayfever diary

Journalize your personal hayfever diary about your allergic complaints and compare with the concentrations of pollen in the air. You will learn more about the preventive measures you have taken and their effort.

You can enroll anonymous or with your name at <http://phd.polleninfo.org>
